

DATABASE: NORTHWIND

(go to Ravi's MySQL Workshop repository, scroll down to find the link to the Northwind dataset, download as zip, then in MySQL Workbench: File --> Run SQL Script for northwind.sql and northwind_data.sql)

1. From the Orders table:
 - a. Show a table with recipient's name, city, state, and shipping_fee
 - b. Ordered by shipping_fee, most expensive at the top
2. From the Orders table:
 - a. Show a table with state and the sum of all shipping_fee for that state
 - i. Group the individual entries by state
 - b. Order by shipping_fee, most money at the top
